

SOLUTION

## AI-powered supply chain insights.

Peak Analytics is the brain behind Peak Automation Intelligence. It's the centralized hub for all your critical data. It combines AI tools, machine learning, and provides full operational visibility by unifying data across docks, pallets, forklifts, and conveyors into a single real-time view of product movement and condition. AI ensures accurate reads in any environment and flags mislabels, damage, and unsafe loads to reduce risk. Automation accelerates throughput with touchless scanning and digital task guidance, while built-in safety and compliance features create a verifiable record for every event. Analytics pinpoint bottlenecks, routing inefficiencies, and damage sources to support smarter planning and operational improvement.

BENEFITS

### Total, End-to-End Operational Visibility

- Unified data capture across docks, pallets, forklifts, and conveyors.
- Real-time traceability from inbound to outbound workflows.
- A single source of truth for product movement and condition.
- Customized AI reporting and alerts for anomaly detection.

### AI-Driven Accuracy & Risk Reduction

- Automatically flags mislabels, damage, and unsafe loads.
- Reduces errors, chargebacks, and manual scanning mistakes.

### Safety, Quality, and Compliance Built In

- AI identifies hazardous conditions and quality issues instantly.
- Creates a verifiable digital record for every scan event.

### Actionable Insights for Continuous Improvement

- Analytics pinpoint bottlenecks, route inefficiencies, and damage causes.
- Operational dashboards drive smarter planning and optimization.
- Data intelligence that reduces costs and boosts throughput.
- Analyzes patterns from dimension measurements vs. vendor manifests.

RESULTS

**20-30%**

Creates centralized data for **20-30% inventory optimization.**

**15%**

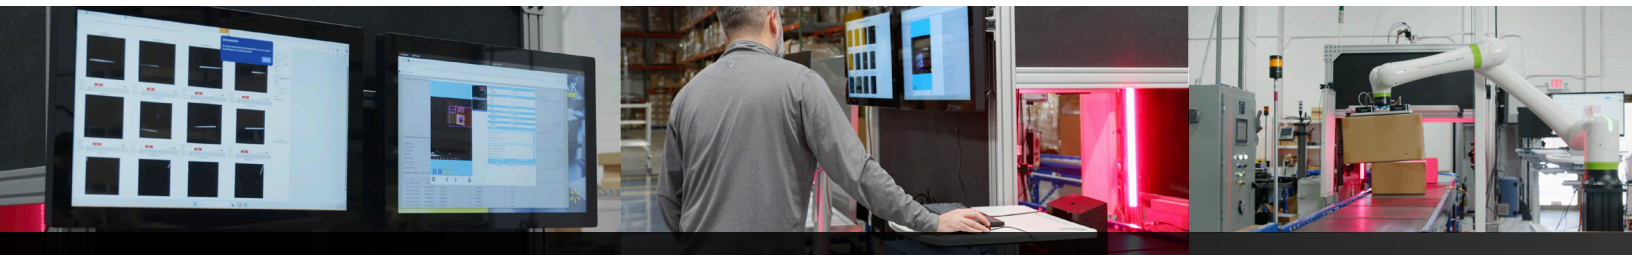

**Delivers 15% reductions** in logistics and inventory related costs.

**50M+**

Scan events per day.

**50M+**

50 million+ **AI inferences.**

## THE NEW AUTOMATION DIVISION OF PEAK TECHNOLOGIES

Peak Automation Intelligence delivers immediate and longterm operational gains through AI-powered automation across docks, pallets, forklifts, conveyors, and analytics. Backed by industry research and real-world results, these solutions drive measurable improvements in throughput, accuracy, labor efficiency, and cost reduction.
