

SOLUTION

Complete pallet visibility. Zero extra effort.

Pallet Insights is a great way to increase efficiency and ROI. Our proprietary tower scans through shrink wrap using specialized optics and lighting to identify barcodes and icons without unwrapping, which removes rework and speeds pallet identification. It sees every side of the pallet and verifies every box and product to ensure complete shipment accuracy and reduce chargebacks. With fast, touchless processing that limits manual handling, it improves worker safety, protects the product, and keeps pallet workflows moving faster than ever.

BENEFITS

Reliable Scanning Through Plastic Wrap

- Specialized optics and lighting penetrate shrink wrap to read barcodes and icons without unwrapping.
- Eliminates rework and speeds up pallet identification.

Complete Shipment Classification

- Identifies every box on a pallet for full shipment verification.
- Reduces chargebacks and improves inventory accuracy.

Faster, Safer, Touchless Processing

- Minimizes manual handling of wrapped pallets.
- Improves worker safety and reduces product damage risk.

RESULTS

99.9%

Increases inventory accuracy to 99.99%, nearly eliminating misships and chargebacks.

5-20%

Reduces logistics costs by 5–20% through fewer errors, improved reads, and optimized handling.

40%

Improve worker productivity by up to 40%, reallocating labor to high-value tasks.

30%

Increase efficiency up to 30%

THE NEW AUTOMATION DIVISION OF PEAK TECHNOLOGIES

Peak Automation Intelligence delivers immediate and long-term operational gains through AI-powered automation across docks, pallets, forklifts, conveyors, and analytics. Backed by industry research and real-world results, these solutions drive measurable improvements in throughput, accuracy, labor efficiency, and cost reduction.
