

AUTOMATION INTELLIGENCE. The Key to CPG Manufacturing Profitability.

AI THAT MAKES THE IMPOSSIBLE POSSIBLE.

CPG manufacturers face unique pressures in today's world. With increasingly slim margins, a reliance on a handful of major retailers, rising consumer expectations, and stringent compliance rules, the need for a connected, transparent supply chain has never been more important. This is where Peak Automation Intelligence comes in. We can help you reduce labor costs and become more efficient without costly down-time. Our automation solutions combine durable, reliable Zebra hardware with custom-built systems that integrate AI software and machine vision which allows you to install in parallel with your current supply chain.

Together, **Peak Automation Intelligence** and **Zebra** enable the connected factory by bridging IT and OT, and turning operational data into actionable intelligence. For global CPG manufacturers, this means scalable automation, predictive operations, and greater agility, without sacrificing reliability, compliance, or speed to shelf.

PEAK
AUTOMATION INTELLIGENCE

THE NEW AUTOMATION DIVISION OF PEAK TECHNOLOGIES

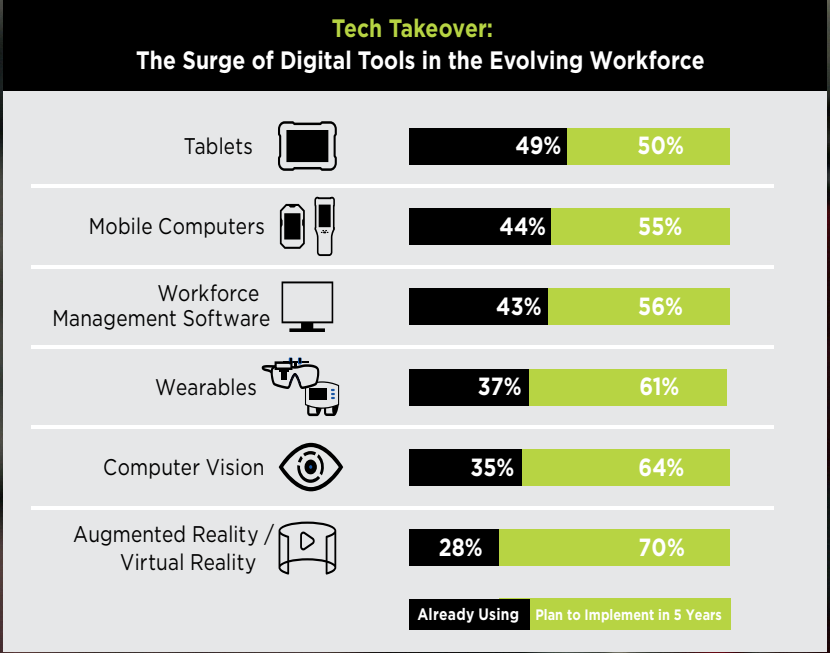

At Peak, we get it—and we have your answers.

We understand the potential of the connected factory, but we also know it can't happen overnight. That's why we help manufacturers modernize step by step with proven technologies from partners like **Zebra Technologies**, including **machine vision, RFID, and fixed industrial scanners** that integrate directly into your existing environment.

Now Is The Time

You can’t wait for the “perfect moment” to automate the factory floor—because it doesn’t exist. What does exist is the opportunity to start small, build on what you already have, and unlock real results fast. And once that foundation is in place, the payoff doesn’t stop. You’re setting up your plant for higher output, lower operating costs, and stronger margins for years to come.

Automation isn’t an expense. It’s an investment in long-term profitability. The sooner you start, the sooner it starts working for you.

Manufacturers Embrace Digital Transformation
Despite Cost and Time Concerns

92%
Digital transformation is a strategic
priority for the organization

90%
Current and projected market conditions
are accelerating digitalization priorities

89%
Digitization projects are time,
cost and labor-intensive upfront
with a long window to realize ROI

Less Waste

Everybody talks about “efficiency,” but for you, waste is real money walking out the door. Zebra machine vision systems and fixed scanners, implemented by Peak, give your operation the ability to see what’s happening across machines, materials, and workflows with real-time accuracy.

- ↗ You catch defects earlier.
- ↗ You prevent rework.
- ↗ You maximize the value of every resource you already own.
- ↗ No major overhaul—just smarter use of what’s already there.

Respond Faster

In manufacturing, surprises are rarely good. With enhanced visibility from Zebra **RFID portals**, **work-in-process tracking**, and **real-time alerts**, your team gains the ability to respond before small issues become big, expensive ones. Automated insights give your operators what they need, when they need it. Your plant runs smoother, shifts stay on track, and downtime becomes the exception, not the norm.

Transforming Manufacturing:

Productivity, Profit and

Competitive Power

Top Benefits of Automation

- Optimize the workforce by enhancing productivity and adding automation

Improve throughput to increase yield and revenue

Improve competitiveness in marketplace

Enhance supply chain and demand resiliency and agility

Improve inventory management and material movement

Workplace Efficiency

Efficiency isn't about replacing people, it's about equipping them. Automation tools like Zebra's fixed industrial scanners and AI-enabled machine vision reduce repetitive tasks, eliminate manual data entry, and streamline inspections. Your workforce gets to focus on meaningful work instead of monotonous chores, while your workflows become faster, cleaner, and more consistent. They're targeted upgrades that deliver quick wins by reducing waste, cutting downtime, and tightening up every shift.

Less Downtime

Unexpected downtime is costly and disruptive. But when your equipment and materials are connected through RFID, bar code data, and real-time analytics, you can spot early warning signs long before a machine grinds to a halt. Predictive maintenance becomes practical. Planned schedules replace emergency fixes.

Your operation stays productive, predictable, and steady.

Plant Floor Optimization

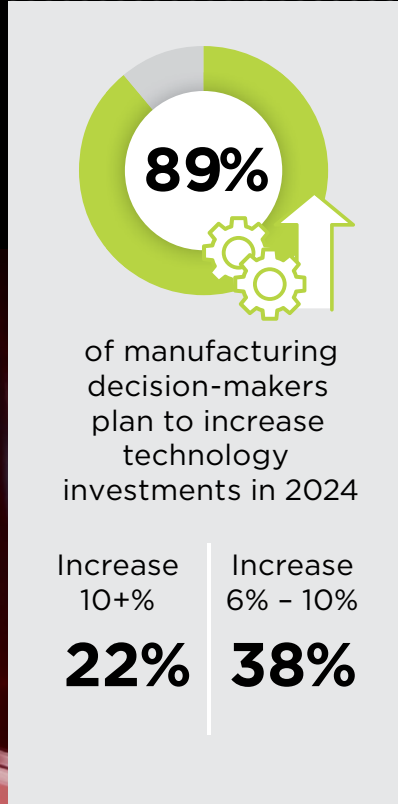

You don't need to rebuild your plant to optimize it, you just need clearer visibility. With Peak Automation Intelligence solutions powered by Zebra's automated tools, bottlenecks become obvious, underutilized assets surface, and improvement opportunities practically highlight themselves. Optimization stops being guesswork and starts being science.

Meet Service-Level Agreements

Reliable turnaround times and consistent quality are the backbone of your customer relationships. Zebra's vision inspection, smart traceability, and RFID-driven accuracy ensure you're monitoring quality, predicting issues, and staying on schedule. You're not hoping everything lines up—you're managing with confidence. And that's how you hit your SLAs—every time.

Stay Competitive

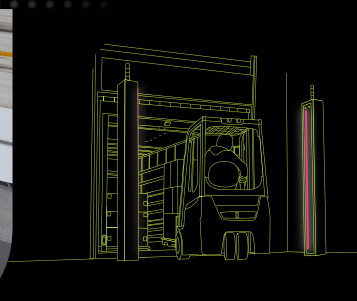

You don't need to become a fully automated mega-facility to stay competitive. Incremental improvements driven by smarter visibility give you agility and precision while maximizing the systems and people you already have. Peak helps you adopt scalable, future-ready tools, so you stay relevant.

MACHINE VISION & AI-ENABLED SOLUTIONS

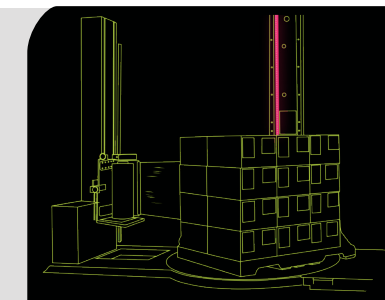

01 ↗ DOCK DOOR INSIGHTS

Peak and Zebra introduce an innovative use of machine vision and AI to scan all incoming and outgoing shipments at your dock. A single tower placed by a dock door can capture every barcode on the entire pallet.

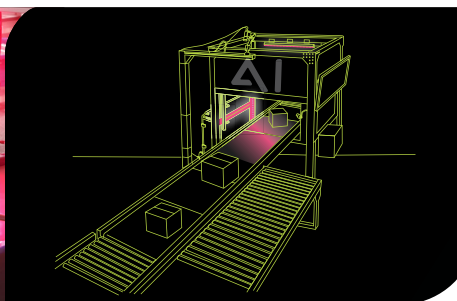

02 ↗ PALLET INSIGHTS

Special cameras and lights allow this scanning system to read bar codes and icons through the plastic wrapping on pallets, allowing you to identify and classify every box in every shipment.

03 ↗ TUNNEL INSIGHTS

A high-speed, efficient conveyor system paired with Zebra fixed scanners, machine vision, and our proprietary AI software will let you know everything about your packages including charge back issues, damages, mislabeling, and incorrect contents.

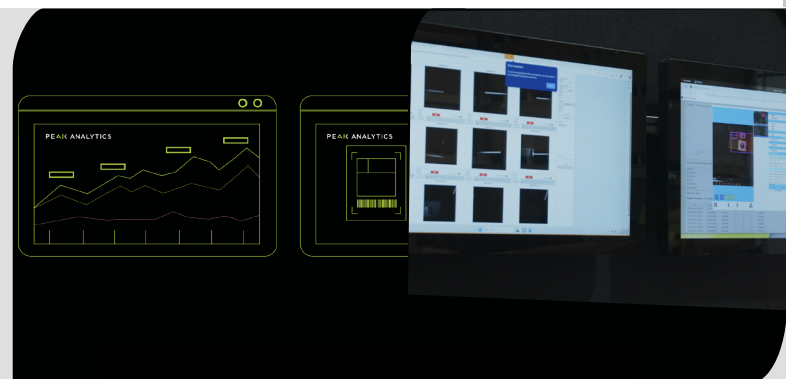

04 MATERIAL MOVEMENT INSIGHTS

With fixed Zebra scanners mounted directly on forklifts and AI software, you can now have box and pallet condition monitoring for improved safety and workflows.

05 PEAK ANALYTICS

Peak Analytics is the AI-enabled software that acts as a centralized hub for all your critical data. It combines AI tools, machine learning, and provides full operational visibility by unifying data across docks, pallets, forklifts, and conveyors into a single real-time view of product movement and condition. AI ensures accurate reads in any environment and flags mislabels, damage, and unsafe loads to reduce risk.

RESULTS

15%

Delivers 15% reductions in logistics and inventory related costs.

50M+

Scan events per day.

50M+

50 million+ AI inferences.

Get an Edge

Visibility gives you more than data, it gives you an advantage. When you know what's happening across your operations in real time, you make smarter decisions, adapt faster, deliver with confidence, and stay ahead of competitors who are still operating in the dark.

A connected factory isn't just about improvement. It's about leadership.

The Numbers Don't Lie

20–30%

cost reduction, ROI in 12–18 months

Mid-sized manufacturers implementing phased digital transformation—data capture, quick win automation, predictive maintenance—Typically see these results.

(Source: 2025 Mid-sized Manufacturing Roadmap; McKinsey's 2024 Manufacturing Tech Survey via vegam.ai)

25–35%

operational cost reduction
with targeted digitization

Smart manufacturers using automation, analytics, digital inspection, and similar tools report significant gains.

(Source: McKinsey 2024 via vega)

20–30%

efficiency improvements
within 90 days

Quick win automation—digital checks, inventory triggers, scheduling—delivers immediate operational benefits.

(Source: Industry Week 2024 via veg)

15–25%

15–25% cost competitiveness
advantage

Digitized operations can underbid manual Processes due to efficiency and quality gains.

(Source: Deloitte 2024 Outlook via vegam.ai)

34%

of manufacturers are already
seeing ROI from AI

Especially in quality inspection and predictive maintenance—key strengths of Zebra machine vision.

(Source: KPMG Global Tech Report 2024)

10–15%

throughput gains

Smart upgrades layered onto existing equipment increase output without increasing labor.
